

# Spectra High-Turnover

The Spectra blend tuned for a higher-turnover regime  
– extracts more of the short-horizon alpha at the cost of higher gross trading volume.

Spectra High-Turnover is a market-neutral portfolio, optimised for higher turnover, that combines seven orthogonal factors: Enhanced Momentum, Enhanced Carry, Retail Flow, Margin Risk, Altair, Mean Reversion and Enhanced Mean Reversion.

The asset universe consists of the most liquid and actively traded assets, identified on a rolling basis – various techniques are employed to keep it both stable and relevant, as well as survivorship-bias free.

To balance each asset's risk contribution, positions are scaled according to the inverse of their rolling volatility.

The portfolio is rebalanced daily, with hourly updates provided, 5 minutes past the hour (UTC).

## TOP 40 CROSS-SECTIONAL MULTI-FACTOR PORTFOLIO
